

DATA SHEET

CYBER SECURITY AS A SERVICE (CSAAS)

Making every part of your business more resilient

Cyber Security as a Service (CSaaS) provides the confidence that comes with knowing your organisation is secure. We take responsibility for procuring, managing and monitoring a comprehensive cyber security wrap for your business – saving you time, money and the stress associated with traditional cyber security solutions.

Our fully managed service threads together three essential aspects of cyber security: People, Process and Technology. The Nasstar methodology, honed from years of experience, combines consultancy and reporting to give you a complete picture of your IT environment, immersive training and accreditation for your people, and crucially, enterprise level protection and detection

technologies powered by real-time network and AI-based insights.

CSaaS not only provides comprehensive protection against both known and unknown cyber threats, but also delivers unrivalled visibility into the strength of your current cyber security defences. This detailed insight enables management teams to accurately assess their level of risk and adapt accordingly.

Supported by a UK-based 24/7 Security Operations Centre, we will keep your employees, customers and data safe so your IT teams can return to focusing on vital value add work.

THE NASSTAR WAY

We will help you rapidly improve your security posture through innovative technology and tailored cyber security services, packaged with straight-talking, jargon-free advice.

Powerful cyber security technology from recognised global industry leaders

A fully managed service backed by a 24/7 UK Security Operations Centre (SOC)

Ongoing training and awareness for employees

Accreditation to industry-recognised cyber security standards

An affordable, fixed monthly fee for as long as you need it

Access to the company's cyber risk score and insight into how to improve it

FEEL SECURE WITH NASSTAR

Security Solution’

Finalist:
‘Best Incident
Response Solution’

**SC Awards Europe
2020 Winner:**
‘Best Managed
Security Service’

100% CSIRT Success
rate in 2019

KEY FEATURES

Whether you need to outsource your security, or simply need one or more of our service modules to address specific vulnerabilities, we're able to tailor our offering to suit you:

\\ Process

To provide you with an effective cyber security strategy, we analyse how your IT infrastructure is being used before determining which controls and policies you need in place to limit any risks.

Some organisations may need specific controls according to their industry regulations. Whatever the case, we'll work with you to establish the security measures necessary to get to baseline certification. As a certified body for the Government-based Cyber Essentials scheme, we can also help you to achieve advanced standards based on your specific business needs, such as ISO 27001, IASME or Cyber Essentials Plus.

\\ People

The education of your people is a critical component in developing a strong cyber security posture. We provide ongoing cyber security training and testing, endorsed by the National Cyber Security Centre, to help reduce risks to your organisation.

\\ Technology

Our automated security technologies monitor and secure all aspects of your infrastructure, minimising any disruption caused by genuine security incidents. These include:

- Vulnerability Management that gives you visibility of any technical vulnerabilities across your entire IT infrastructure – from the data centre to end user devices.
- Threat Detection & Response by our 24/7 Security Operations Centre, to continuously monitor your environment using constantly updated threat intelligence sources. In case of an incident, we'll immediately isolate the threat and help you resolve it at speed.
- Penetration Testing, using our team of CREST certified ethical hackers to analyse your systems and see how they perform under attack, for clear insight on how to finetune your protection.
- Multi-level reporting will provide tangible results to your stakeholders – the Board, shareholders, suppliers or regulatory bodies – to highlight how well your cyber security controls are performing, and if any further measures should be implemented.

CYBER SECURITY IN NUMBERS

68% of business leaders feel their cyber security risks are increasing

(Source: Accenture)

Hackers attack every 39 seconds, on average 2,244 times a day

(Source: University of Maryland)

In 2020, security services were expected to account for 50% of cyber security budgets

(Source: Gartner)

On average, the cost per lost or stolen records per individual is £109

(Source: Ponemon Institute's Cost of Data Breach Study)

You'll save approximately 70% on cyber security costs when opting for a managed security service over purchasing individual security solutions

“Nasstar act as an extension of the St Wilfrid’s Hospice IT team for both infrastructure and security services. Personalised, proactive security focus and 24/7 risk categorisation based on intent provides priority focus when we need it most. Any identified issues are recorded within ServiceNow for full visibility and actioned in line with our agreed escalation profile round-the-clock. This enables our IT team to focus on key projects and priorities, secure in the knowledge that our systems are in safe hands.”

Laurence Duffell, IT Manager at St Wilfrid’s Hospice
