

AZURE SENTINEL WORKSHOP

Gain a bird's eye view across your enterprise with SIEM for a modern world

Workshop Highlights

Understand the features and benefits of Azure Sentinel

Better understand, prioritise, and mitigate potential threat vectors

Gain visibility into threats across email, identity, and data

Develop joint plans and next steps

Create a defined deployment roadmap based on your environment and goals

"With everything running through Azure Sentinel, we've reduced the time spent on case management and resolution of alerts by approximately 50 percent"

- Stuart Gregg, Cyber Security Operations Lead, ASOS

As IT becomes more strategic, the importance of security grows daily. Security information and event management (SIEM) solutions built for yesterday's environments struggle to keep pace with today's challenges - let alone tomorrow's unimagined risks.

That's why Microsoft developed Azure Sentinel, a fully cloud-native SIEM.

See and stop threats before they cause harm with an Azure Sentinel Workshop

Azure Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for alert detection, threat visibility, proactive hunting, and threat response.

Get an overview of Azure Sentinel along with insights on active threats to your Microsoft 365 cloud and on-premises environments with an Azure Sentinel Workshop.

CHOOSE THE APPROACH THAT'S BEST FOR YOU

Every organisation is different, so this workshop can be customised to fit your environment and goals. Pick from two options:

1

Remote monitoring

If your organisation doesn't have its own security operations centre (SOC) or if you want to offload some monitoring tasks, we will demonstrate how **Nasstar** can perform remote monitoring and threat hunting for you.

2

Joint threat exploration

If your organisation is interested in learning how to integrate Azure Sentinel in your existing SOC by replacing or augmenting an existing SIEM, we will work with your SecOps team and provide additional readiness to bring them up to speed.

WORKSHOP HIGHLIGHTS

We will work with you to:

-  **Discover threats** to your Microsoft 365 cloud and on-premises environments across email, identity and data.
-  **Understand how to mitigate threats** by showing how Microsoft 365 and Azure security products can help mitigate and protect against threats that are found.
-  **Plan next steps** and provide information to build a business case for a production deployment of Azure Sentinel including a technical deployment roadmap.

Depending on the selected scenario, you will also:

-  **Experience the benefits of a managed SIEM** with a true cloud native SIEM, managed and monitored by our cybersecurity experts. (Remote Monitoring scenario)
-  **Receive hands-on experience**, learn how to discover and analyse threats using Azure Sentinel and how to automate your Security Operations to make it more effective. (Joint Threat Exploration scenario)

WHAT WE'LL DO

-  Analyse your requirements and priorities for a SIEM deployment
-  Discover threats and demonstrate how to automate responses
-  Define scope & deploy Azure Sentinel in your production environment
-  Recommend next steps on how to proceed with a production implementation of Azure Sentinel
-  Remote monitoring* and proactive threat hunting to discover attack indicators
*optional component
