

DATA SHEET

CLoud OPTIMISATION: CONSULTANCY SERVICE

Also available as a Next Generation Managed Service to best meet the needs of your business.

WHAT IS IT?

Even years after migrating, some organisations are yet to see any cost savings from the cloud, while others lack the in-house knowledge to keep things running smoothly.

That potentially leads to dangers like uncontrollable spending, wasted compute, and an inability to keep pace with market demands.

Nasstar's Cloud Optimisation consultancy service allows organisations to better understand their IT resources. We work closely with customers to ensure they're only paying for what they use.

As your strategic advisor, we'll monitor, review, and make recommendations on how to optimise your cloud environment. By leveraging the right mix of services and expertise, we can bring accountability and transparency to your cloud spend.

HOW DOES IT WORK?

As an experienced advisor, Nasstar will assess your current technology solutions and identify areas for optimisation. We will review potential outcomes and then develop a plan for you to implement. We can also advise on new products and systems that will help you meet your business goals.

At the heart of our optimisation model is our Cloud Centre of Excellence. This team of experts are continuously evolving our standards, embedding best practices, and driving innovation to deliver value and opportunity for your business.

Aided by bespoke custom dashboards to benchmark and measure progress, our team will uncover your biggest opportunities for

improvement and provide a point-in-time view of your carbon emissions.

We'll work closely with your business to uncover innovation opportunities, maximise ROI, and monitor your carbon footprint. We'll help you improve your understanding, ensuring that your cloud story continues to evolve.

Need dedicated always-on resource? We also offer Cloud Optimisation as a [Next Generation Managed Service](#).

KEY FEATURES

Trusted Advisor

We'll advise on optimising your cloud infrastructure, improving security and performance, reducing costs and monitoring service usage quotas.

Carbon Calculator

We report, measure, and analyse carbon emissions from your cloud infrastructure to provide the visibility you need to make changes and track progress.

Business Context Assessment

Assessing customers' business and technical solutions against any tooling recommendation..

Cost Optimisation Recommendations

We'll create high-level quick-win savings, advise on architectural and application changes for medium-term gains and assess your security posture.

Governance

Budget/usage threshold alerting, tagging policy and governance implementation.

THE NASSTAR WAY

At Nasstar, our Cloud Optimisation solution spans people, processes, and technology. It's tailored to fit your organisation's maturity and capabilities and is also available as a Next Generation Managed Service to keep with the ever-changing nature of cloud technology.

With expertise in both leading public cloud platforms, AWS and Microsoft Azure, our consultants will act as your trusted advisors to help you achieve smarter business outcomes.

From cloud migration to [adoption](#), [application modernisation](#) and optimisation, our services are Secure by Design and backed by next-generation [Cloud Managed Services](#) that will enable your organisation to evolve and adapt to customer demand and market trends.

We've supported household names such as Sainsbury Bank, Rail Delivery Group, Center Parcs, and Jaguar Land Rover on their cloud journey; we can help you too.
