NASSTAR

DATA SHEET

CLOUD OPTIMISATION: MANAGED SERVICE

Also available as a Consultancy Project to best meet the needs of your business.

WHAT IS IT?

Despite migrating to the cloud, some organisations are yet to see the benefits on their balance sheets. Other businesses lack the visibility and knowledge to fully understand their cloud solution.

That opens them up to dangers like uncontrollable spending, a lack of understanding of cloud pricing models, and an inability to keep pace with technological innovation.

Nasstar helps businesses of all sizes understand and continuously optimise their cloud resources. We work closely with our customers to ensure they're only paying for what they use. On an ongoing basis, we'll leverage the right mix of services, to manage and maximise your application performance while reducing expenditure and risk.

HOW DOES IT WORK?

At the heart of our continuous optimisation model is our Cloud Centre of Excellence – a team of experts who are constantly evolving our standards, embedding best practices, and driving innovation to deliver value and opportunity for your business.

Aided by bespoke custom dashboards to benchmark and measure progress, our experts produce monthly reports, heatmaps and recommendations that cover your biggest opportunities for improvement.

Your dedicated Cloud Delivery Manager will work closely with your business to discover innovation opportunities and cost optimisation solutions to maximise ROI. We'll also empower your teams, educating and nurturing them throughout your cloud transformation to encourage adoption, ensuring that your cloud story continues to evolve.

KEY FEATURES

Trusted Advisor
A series of checks focussed on optimising your cloud infrastructure, improving security and performance, reducing costs and monitoring service usage quotas.

Carbon Calculator
We report, measure, and analyse carbon emissions from your IT infrastructure to provide the visibility you need to make changes and track progress.

Business Context Assessment
Assessing customers' business and technical solutions against any tooling recommendation.

Governance
Budget/usage threshold alerting, tagging policy and governance implementation.

Cost Optimisation Recommendations
We'll create high-level quick-win savings, advise on architectural and application changes for medium-term gains and assess your security posture.

THE NASSTAR WAY

At Nasstar, our Cloud Optimisation Manage Service spans people, processes, and technology. It's tailored to fit your organisation's maturity and capabilities and is also available as a consultancy project to best suit the needs of your business.

With expertise in both leading public cloud platforms, AWS and Microsoft Azure, our consultants will act as your trusted advisors to help you achieve smarter business outcomes..

From cloud migration to adoption, application modernisation and optimisation, our services are Secure by Design and backed by next-generation Cloud Managed Services that will enable your organisation to evolve and adapt to customer demand and market trends.

We've supported household names such as Sainsbury Bank, Rail Delivery Group, Center Parcs and Jaguar Land Rover on their cloud journey; we can help you too.
